Electronical Quantitative Scale

Electronical Quantitative Scale operate by vibration on feeding tray for material drop out from storage tank, feeding device controlled by weighing control system; All material will drops into a weighing hopper, when the material weight to reach the final value, feeding vibrator will stop and the dynamic weighing process is complete; After each weighing process press the control to open the weighing hopper door, material into the ready bag or bottle and next cycle start automatically.

Electronical Quantitative Scale is widely used for quantitative weighing and packing grains and granules (such as rice, beans, feed, chemical raw materials, etc).

WPM3 Semi-Automatic Electronical Quantitative Scale

WPM3 Semi-Automatic Electronical Quantitative Scale is a fast and easy assembly design complete with Stainless steel structure for easy cleaning. WPM3 Scale range 50 - 3000 grams with $\pm 0.3\%$ allowance. Machine design with special feeding modes with three kinds of speeds: fast, medium, and slow, control by vibrator to reduce packaging error.

WPM3 Semi-Automatic Electronical Quantitative Scale operate with micro-computer touch screen control. Machine have memory setting able to save maximum 20 difference formula for packing difference products. Machine design with weighing record for query or reporting and variety of data communication interface, which able to link with computer data management.

WPM3 Semi-Automatic Electronical Quantitative Scale are industrial-grade long lasting machineries built with selected high quality electronic components and therefore will require lesser maintenance.

TECHNICAL DATA

Model	WPM3
Rated Voltage	1 Phase 240V
Power Supply	750W
Range of Weighing	50 - 3000 gram
Allowance	$\pm 0.3\%$ (depend on product)
Power Supply	6 - 12 times / min (depends on packing weight)
Storage Tank Volume	50 liter
Control Panel	Touch Screen
Data Memory System	Yes
Machine Structure	304 Stainless Steel
Machine Dimension	510mmL x 580mmW x 1530mmH
Machine Weight	110 Kg
